This set of segments of the fence can be used as a garden barrier or a fence for the living area for privacy and safety.

Made of WPC (wood-plastic composite), the garden fence is durable and resistant to rotting and rust. The garden barrier has wood on one side and the usual patterns on the other, so you can choose the design that you like best. Thanks to the upper aluminum profile, the segments of the fence can be tightly connected to each other, thereby ensuring their strength and durability to impacts.

Characterized by a modular design, the segments of the fence are easy to install and ensure that you can easily extend the fence. These pillars have three openings that will allow you to install the fence in different ways, for example, in a straight line (at an angle of 180 degrees), tilted to the right (at an angle of 90 degrees) or in the form of a T. Multifunctional steel legs can be fixed in two ways. One way would be to fix them to the surface with the help of screws for fortification, the other - using stakes studded into the ground (not added), to fix them on a concrete base. Chiudi
