EMUFDD - USB floppy disk drive emulatore & simulatore

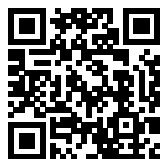

Based on the same technology of the Network EMUFDD, the USB-only version is suitable for users with no access to a network connection or exchanging a very low amount of daily data. Same internal FRAM buffer, that behaves like a hard disk, can be loaded/saved using a standard USB key. No need to pre-format the USB key with special hidden partition or to keep the USB key always in after data exchange. 00-99 numbered display can be used to choose subdirectories and non-standard images, both fully supported.

Basato sulla stessa tecnologia dell'EMUFDD di rete, la versione solo-USB è adatta agli utenti senza accesso ad una connessione di rete o che scambiano un quantitativo di dati giornaliero molto limitato. Lo stesso buffer FRAM interno, che si comporta come un hard disk, può essere caricato/salvato usando una chiavetta USB standard. Non bisogna pre-formattare la chiavetta USB con speciali partizioni nascoste, e nemmeno mantenere la chiavetta USB sempre inserita dopo lo scambio dati. Un display numerato 00-99 può essere usato per selezionare subdirectory e immagini non-standard, entrambe pienamente supportate.
