

Fender - Phaser - Effect pedal (70 EUR)

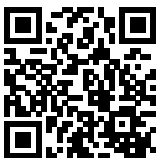

Luogo **Friuli-Venezia Giulia, Udine**
<https://www.annunci.it/x-242799-z>

input impedance: 470kohm
nominal input level: -20dbv
output impedance: 4.7kohm
nominal output level: -20dbv
recommended load impedance: 50kohm or greater
power requirements: 9vdc (center pin = negative); 40ma minimum
features:

- rate—this knob controls the rate at which the phase shifting occurs. the rate control knob alternately illuminates blue and red at the same rate as the phase shifting.
- intensiity—this knob adjusts the intensity of the phasing effect.
- frequency—this knob adjusts what frequencies are affected by the phasing action. fully counter-clockwise causes the bass frequencies to be affected most by the phasing action, fully clockwise causes the treble frequencies to be most affected by the phasing action.
- bypass switch—a “true-bypass” of the phaser effect. turns the phasing effect on-off.
- output jack—connect to the input of your amplifier (or other audio device).
- input jack—plug your guitar (or other audio source) in here. un-plug the input plug from this jack to turn off the device and save power (very important) when not in use.
- dc input jack Chiudi
