

Canon model IVS, with Canon 50mm f2.8 lens. Japan 1952-53. (140 EUR)

Luogo **Lazio, Latina**  
<https://www.annunci.it/x-263810-z>

This 35mm rangefinder camera is a nice collector's item: the shutter works properly (all shutter speeds work, including slow speeds down to 1 second); cloth curtains are efficient; double image has good contrast; film transport works well; the viewfinder has a fair visibility (and to improve it a Canon 35mm external viewfinder is added, quite clear); Canon 50mm f2.8 lens works and has no fungus, but backlight shows little dust in rear lens (no impact when taking a picture). Aesthetically, the camera appears very well preserved: there are no tears in the leather cover, no corrosion to the paint and no dents. Comes with an original leather shoulder strap. Camera has not been used with film. The photos are part of the description and are in all respects valid to be used if something is not specified in the auction description. Tracked and insured shipping.  
ATTENTION: Shipping only in Europe. Chiudi
