

# kit salva caldaia (100 EUR)

KIT salva caldaia con defangatore magnetico, dosatore di polifosfato con attacco laterale e filtro neutralizzatore di condensa

KIT boiler safing including magnetic dirt separator, polyphosphate feeder with side connection and condensate neutralizing filter

Luogo

Lazio, Ferentino

<https://www.annunci.it/x-37863-z>

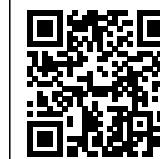

Il kit salva caldaia composto da defangatore, dosatore e neutralizzatore condensa è un insieme di strumenti utilizzati per la manutenzione e la protezione della caldaia.

Il defangatore è un filtro che trattiene le impurità presenti nell'acqua e impedisce che queste si depositino all'interno della caldaia, causando danni al sistema. Il dosatore, invece, si occupa di aggiungere prodotti chimici come anticalcare e antiossidante all'acqua della caldaia, in modo da prevenire la formazione di calcare e la corrosione delle parti metalliche. Infine, il neutralizzatore di condensa è un dispositivo che neutralizza l'acidità dell'acqua di condensa prodotta dalla caldaia, impedendo che questa danneggi le tubazioni e gli scarichi.

Insieme, questi strumenti aiutano a mantenere la caldaia in buone condizioni, prevenendo danni e prolungando la vita utile del sistema.
