

99 Lead Acetate Trihydrate in Metal Paiting CAS 6080-56-4

Luogo

Lazio, Roma

<https://www.annunci.it/x-536936-z>

Lead Acetate

White monoclinic crystal, density 2.55g/cm³(25°C).

Melting point 75°C (hot).Combustible.

A slight odor of acetic acid.

Having the property of weathering.

Refractive index 1.567.

It is a covalent compound and a weak electrolyte.Soluble in water, solubility 55.04g/100g water.

It is also soluble in glycerol and insoluble in ether.

Anhydrous lead acetate was formed from water loss at 75°C. Chiudi
