Stitching technology

• Kolor was the first company to foresee the potential of SIFT technology for image stitching, in which its Autopano software became the world reference. In 2010 Kolor created the world's largest image: Paris 26 Gigapixels. 2011 saw Kolor launch its new range that includes image-stitching software (Autopano Pro and Autopano Giga) and virtual tour creation software (Panotour and Panotour Pro). The expertise developed by Kolor now enables to offer the automated stitching solution included in the Girocam
