The Rage 128 PRO Ultra was a graphics card by ATI, launched in August 1999. Built on the 250 nm process, and based on the Rage 4 PRO graphics processor, in its 215R4GAUC21 variant, the card supports DirectX 6.0. The Rage 4 PRO graphics processor is a relatively small chip with a die area of only 98 mm² and 8 million transistors. It features 2 pixel shaders and 0 vertex shaders, 2 texture mapping units and 2 ROPs. Due to the lack of unified shaders you will not be able to run recent games at all (which require unified shader/DX10+ support). ATI has placed 32 MB SDR memory on the card, which are connected using a 64-bit memory interface. The GPU is operating at a frequency of 130 MHz, memory is running at 130 MHz.

Being a single-slot card, the ATI Rage 128 PRO Ultra does not require any additional power connector, its power draw is not exactly known. Display outputs include: 1x VGA. Rage 128 PRO Ultra is connected to the rest of the system using an AGP 4x interface.
